## استمارة تسجيل مشروع التخرج

العام الجامعي: 2024 /2023

اسم المشروع:

تصميم وتنفيذ مركبات غير مأهوله باستخدام عصا التحكم وتطبيق المويايل علي المتحكم الدقيق

Project title:

Controllable unmanned cars using wireless joystick and mobile application with microcontroller

المشرف على المشروع: أرد / محمد محمود على فؤاد

- الم شادي احمد بدير

الهيئة المعاونة بالمشروع: - من / محمد ماجد طلعت الحسيني

فريق العمل من الطلاب:

الهدف العام من المشرى ع

مركبات غير ماهوله لتطوير واستخدام تكنولوجيا دون تدخل عامل بشري في المجال العسكري يهدف الى عدم تعرض الجنود للخطر مثل استطلاع المناطق الخطره والمهمات ، في المجال الطبي لنقل الادويه والمعدات للمناطق التي تعاني من كوارث طبيعيه والعديد من المجالات الاخري عن طريق اداه تحكم عن بعد و تطبيق هاتف عبر البلوتوث

عن طريق اداه تكتم عن بعد و المغروع:

مركبات غير ماهوله باستخدام الاردوينو وعصا التحكم وموبايل ابلكيشن لتنفيذ الهدف من المشروع.

	Graduation Project -			
Project Title	Unmanned cars using wireless joystick and mobile application with microcontroller			
Supervised By	Prof. Dr. Mohamed Mahmoud Aly Fouad			
Participating Students	1- Motaz Ibrahim Gaber Aly 2- Nansy Khaled Sayed Ahmed 3- Mario Emad Edward 4- Omar Mohamed Ahmed Elsayyed 5- Aly Farouk Aly 6- Yasmin Mahdy Faheem 7- Mohamed Eid Mahmoud			
Brief Description	The project aims to develop a robust and autonomous vehicle capable of navigating its environment using sensors and making decisions based on C-coded algorithms. Our goal is to design an unmanned car based on Arduino using the C++ programming language to take advantage of its utmost importance to facilitate our daily lives at home or abroad in transporting and delivering things, and to reduce human disasters in some fields such as the medical field to deliver medicines and medical equipment to remote areas or to patients as well as the military field. To explore dangerous environments with little human risk.			
Expected Learning Outcomes	<ul> <li>Students will be able to: <ul> <li>Gain practical experience in building an Arduino-based unmanical car using the C programming language.</li> <li>Increase self-skills in hardware-software integration and low-less programming for autonomous vehicle control.</li> <li>Understand the importance of C language in developing efficies and reliable code for unmanned car operations.</li> <li>Develop problem-solving skills by managing the entire project.</li> <li>Develop teamwork skills by working in a well-organized team.</li> <li>Develop communication skills and ability to take responsibilities collaborating with third party.</li> </ul> </li> </ul>			
Expected Project Outcomes	There will be an Arduino-based application that makes the control a monitoring of unmanned cars easier. It utilizes the C programmi language to implement efficient algorithms for autonomous navigation and decision-making. The application provides real-time data a visualizations for seamless unmanned car operations.			

Available Resources	Access to all necessary tools for Arduino development, C programmin language resources, hardware components, and research materials of unmanned car technology.			
Required Resources	<ul> <li>Arduino Development Kit.</li> <li>C Programming Language Resources.</li> <li>Hardware components (motors, sensors, etc.) .</li> <li>Tools for hardware-software integration.</li> <li>Research materials on Arduino-based unmanned car technology.</li> <li>All required resources will be managed by the students.</li> </ul>			
Skills Required	<ul> <li>C++ Programming Language: essential for low-level programming and algorithm development for unmanned car control.</li> <li>Arduino Development: skills related to programming Arduing boards for hardware: software integration in unmanned vehicles.</li> <li>Hardware Integration: expertise in integrating various hardware components such as motors and sensors into an Arduino-based system.</li> <li>Autonomous Systems Development: skills related to developing and implementing autonomous systems for unmanned vehicles.</li> </ul>
